ISCO and U.S. DHS to Demo Radio Over Wireless Broadband Technology

By [Calvin Azuri](#)

TMCnet Contributing Editor

ISCO International ([News - Alert](#)) has partnered with the U.S. Department of Homeland Security's (DHS) Science and Technology (S&T) Directorate and the District of Columbia's Office of the Chief Technology Officer and will demonstrate new Radio Over Wireless Broadband (ROW-B ([News - Alert](#))) technology on Wednesday, August 27, 2008 in Washington, D.C.

ROW-B connects existing wireless radio systems with advanced broadband technologies which saves critical response time. These technologies include cell, laptops and smart phones.

The ROW-B pilot project is using the same technology during July and August 2008 in order to connect the district's existing land mobile radio system with broadband services. The technology also provides users with geographic information on the location of other vehicles, equipment and responders. This

clearly displayed geographic information helps improve response and provides effective information sharing.

The demonstration will be attended by David Boyd, director, Command, Control and Interoperability Division, Science and Technology Directorate, U.S. Department of Homeland Security, and Chief Demetrios Vlassopoulos, deputy fire chief, CIO, Washington, D.C. Fire and EMS Department, Gordon Reichard, president and CEO of ISCO International, and representatives from public safety and emergency response communities.

ISCO International is a wireless telecommunications provider and global supplier of radio frequency management and interference control systems. After ISCO acquired Clarity Communication Systems in January 2008, it began offering a suite of highly differentiated solutions for mobile operators, network infrastructure providers and other resellers of wireless products and software solutions. The solutions offered by ISCO include adaptive interference management and radio frequency spectrum conditioning for wireless technologies along with integrated software solutions for public safety and enterprise customers. ISCO is a pacesetter provider of subsystems and components for all wireless technology platforms.

The solutions of ISCO enable seamless integration of technologies and condition, and enhance the RF link to enable the ultimate end-user wireless experience. The company was founded in 1989 and designs, manufactures and distributes products that improve the radio link by suppressing interference and improving signal handling in wireless network telecommunications systems. The product portfolio of ISCO includes Adaptive Notch Filter platform, Radio Link Radio Frequency Fidelity platform and product and service solutions.

Don't forget to check out TMCnet's [White Paper Library](#), which provides a selection of in-depth information on relevant topics affecting the IP Communications industry. The library offers white papers, case studies and other documents which are free to registered users. Today's featured white paper is [Fixed Service Strategies for Mobile Network Operators](#), brought to you by Comverse ([News - Alert](#)).
